

## PermaCool electrostatic ambient air filters

- Quick Features :**
- Durable, rigid filter media
  - 10 micron filtration
  - 3 layer waffle weave design

The POF series pull-out filters are used with the IQ series air conditioners.

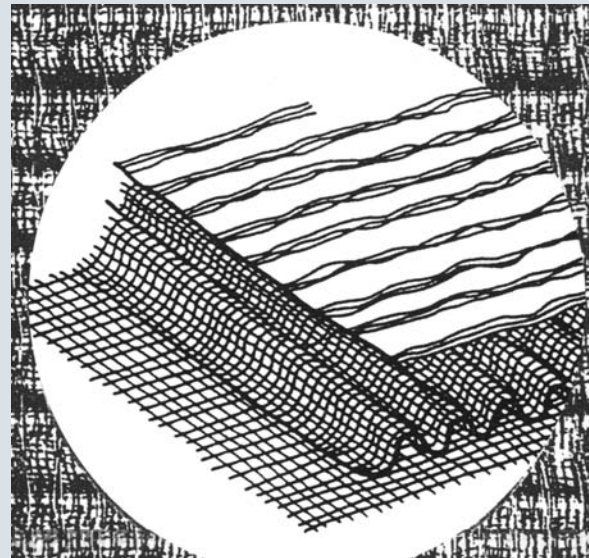

Eurobex air conditioners use PermaCool electrostatic filter media to keep dust and other industrial residues from clogging the condenser cooling air passages. The filter media is a rigid

and durable 1/4" corrugated polypropylene media with 10 micron filtration which maintains a low resistance to airflow. The filter media will withstand harsh factory environments and will not degrade over time. Simple washing or vacuuming is all that is necessary to maintain the filter media

over an indefinite period of time. PermaCool's dense, three layer, 1/4" waffle weave configuration enhances its filtration abilities and creates a rigid electrostatic air filter. Unlike other media which may compress and restrict air flow, PermaCool retains its low resistance design.

THREE LAYER, 1/4" WAFFLE WEAVE CONFIGURATION
